## BKB CD

This CD consists of the recordings developed by the Institute of Hearing Research, Medical Research Council (IHR/MRC) and University College London (UCL). The recordings are of both male and female speakers in PCM format sampled at 22050Hz. Also on the CD are four sample noises: pink noise, white noise, speech noise and babble. This CD has been released for research purposes only and we are unable to offer any technical support regarding its use.
